

# OPEN MEMORANDUM TO THE LEADERS OF THE EUROPEAN UNION

## *“Ethical Technological Union – On the Threshold of a New European Renaissance “*

From: Lorant Sipos, Founder of Globidealism

Date: June 27, 2025 – during the NATO Summit in The Hague

### **Dear Leaders of the European Union,**

The history of the European Union is the triumph of peace and the struggle for freedom. Now, in the middle of the 21st century, we are facing new challenges:

- the unprecedented development of artificial intelligence,
- geopolitical tensions and threats of war,
- and the urgent need to protect democracy and human rights.

The EU is in a unique position: as one of the world’s greatest economic and ethical forces, it has the capacity to lead the human story into a new era of global, human-centered technological development.

**This memorandum is not merely a proposal – it is an invitation to co-create a new age guided by the spirit of Globidealismus, ethics, and knowledge.**

---

### **I. The Vision of the Ethical Technological Union**

The EU has already been a pioneer in the field of digital rights and regulation (AI Act, GDPR). Today, we have the opportunity to take this leadership to an even higher level.

#### **Our proposals:**

- **Me + AI Ethical Code**  
A Union-level framework of principles ensuring that every autonomous system prioritizes

human dignity, transparency, and accountability.

*(This document complements the ethical foundations of the EU AI Act with a global framework supported by civil participation.)*

- **GRM 808 System**

A real-time decision-support platform with civic participation that, for example, during crises (energy crisis, health emergencies, military threats) creates recommendations for decision scenarios and models their anticipated social impacts.

*(The system can be introduced as a pilot program to ensure its practical feasibility.)*

## II. The Beginning of a New European Renaissance

The historical courage and desire for freedom of the Hungarian and Slovak peoples prove that Europe's real strength lies in shared responsibility and respect for liberty.

**Our future does not lie in division – but in collaboration.**

Establishing the Ethical Technological Union can mark the beginning of a *European Renaissance* in which AI is not a source of fear but a tool of progress and ethical leadership.

---

## III. Invitation: Me + AI World Peace Conference – Budapest, 2026

We hereby cordially invite the institutions, decision-makers, and Member States of the European Union to the **2026 Me + AI World Peace Conference**, whose objectives are:

- The open signing of the **Me + AI Ethical Code**,
- Presentation of the pilot results of the **GRM 808 System**,
- Initiation of the debate around the **UN 2.0 Digital Constitution**, a long-term vision that could emerge from broad international partnerships and societal consultations.

**Budapest**, as a historic bridge between East and West, is the worthy venue for this dialogue and the birth of a new future.

---

## Closing Thought

“Political positions may differ, but our future is shared.”

The Me + AI World Peace Conference and Globidealizmus do not seek sides – they build bridges. We do not wish to dominate technology but to form an **ethical alliance with it in the service of humanity**.

This memorandum is not a warning – it is an **invitation**. Into a new era where **power is paired with wisdom, AI with ethics**, and the **EU with vision**.

---

**With respect and a spirit of cooperation,**

Lorant Sipos

Founder of Globidealism

Organizer of the Me + AI World Peace Conference

Architect of GRM 808 – Infinity Global Relationship Management

6/26/2025
