UN Submission Abstract

Humanity is entering a phase of accelerated technological, geopolitical, and informational transformation in which existing ethical systems are no longer capable of maintaining global stability. Recent analyses conducted by the GRM808EI Ethical Intelligence System indicate a critical decline in ethical coherence, escalating conflict-energy, and measurable degradation of intention-field stability. These trends — reflected in falling EKI, SRI, and ΘR indices, rising CGR and Λ_e variability — constitute a systemic Ethical Overshoot requiring coordinated international response.

This submission proposes the implementation of a **Global Ethical Moratorium**: a temporary stabilization framework enabling states, institutions, and AI governance bodies to regain ethical coherence before further acceleration amplifies systemic risk. The moratorium prioritizes four normative principles derived from the I +AI Ethical Code: truth precedence (TUDOK), non-violent decision-making (BÁTOR), intention-field restoration (SZERETEK), and transparency (MUTATOM).

Key measures include mandatory ethical auditing of frontier technologies, de-escalation protocols in conflict zones, global coherence-restoration initiatives, and the international validation of the GRM808EI Civilizational Operating System (COS 5.1). The moratorium provides a structured pathway for safeguarding human dignity, stabilizing global systems, and enabling a coordinated civilizational transition.

EXECUTIVE SUMMARY

(One-Page Overview of the Global Ethical Moratorium Declaration)

Human civilization has entered a phase where **ethical coherence, conflict dynamics, and intention-field stability** have deteriorated beyond safe operational thresholds. Based on comprehensive measurements from the **GRM808EI Ethical Intelligence System, COS 5.1 Civilizational Operating Framework**, and **TT-Core Quantum Ethical Analysis**, there is sufficient scientific evidence to initiate a **Global Ethical Moratorium**.

This moratorium is **not a halt**, but a **controlled redirection** of global technological, political, and socio-informational processes — designed to prevent irreversible instability and to restore the ethical phase-coherence necessary for sustainable civilizational development.

Why the Moratorium Is Necessary — Key Findings

Recent global assessments (2023–2025) show:

- **Ethical Coherence Index (EKI)** has fallen to *critical levels* (42–53), indicating fragmentation of the ethical field.
- **Conflict Generation Rate (CGR)** exceeds *0.75*, reflecting accelerating global escalation pressure.
- **Synchronic Resonance Index (SRI)** remains *below 0.60*, showing reduced collective cooperation and heightened polarization.
- **Theta Resonance (ΘR)** — the measure of intention-field stability — has decreased below the safe operational threshold (0.75).
- **Truth Coherence (TUDOK)** has degraded significantly, impairing shared reality and decision-making foundations.
- **Ethical Vacuum Constant (Λ_e) derivative** exceeds safe bounds, indicating systemic instability within the civilizational resonance field.

Together, these indicators confirm a **near-collapse condition** in the global ethical field.

This constitutes an **Ethical Overshoot**, as defined in the GRM808EI Final Ethical Declaration.

Purpose of the Moratorium

The moratorium aims to:

1. **Stabilize global ethical dynamics** (EKI > 60).
2. **Reduce conflict-energy** and initiate global de-escalation protocols (CGR < 0.50).
3. **Restore intention-field coherence** (ΘR > 0.75; SRI > 0.70).
4. **Reintegrate truth-alignment standards** through TUDOK-based auditing.

5. **Recalibrate the Civilizational Operating System (COS 5.1)** before further technological acceleration.

This stabilization is essential for the safe advancement of society, technology, AI, and geopolitical systems.

Core Principles Underlying the Moratorium

The ÉN+AI Ethical Code establishes four primary normative operators:

- **TUDOK (§2)** — Primacy of truth
- **BÁTOR (§3)** — Ethical courage & non-violent decision-making
- **SZERETEK (§9)** — Restoration of intention-resonance
- **MUTATOM (§8)** — Transparency and open communication

These principles form the ethical foundation for all moratorium-related protocols.

Required Measures During the Moratorium

- **Mandatory ethical auditing** of all AI/AGI development (TUDOK compliance).
- **Immediate freeze of active conflict zones**, applying de-escalation frameworks (BÁTOR operator).
- **Global intention-field stabilization programs** (raising ΘR).
- **International validation of the GRM808EI Ethical Code**, including COS 5.1 compatibility testing.

These processes collectively restore civilizational coherence and prepare humanity for transitioning into a higher ethical-operational phase.

Call to Action

We call upon **nations, intergovernmental institutions, AI research laboratories, corporations, academic bodies, religious communities, and civil society** to join the **Global Ethical Moratorium** and participate in the **international validation of the GRM808EI framework**.

The moratorium is not a constraint — it is a **civilizational safeguard**, ensuring that humanity advances with **coherence, dignity, and ethical integrity**.

Purpose of This Document

This declaration announces the implementation of a **Global Ethical Moratorium**, a temporary but essential stabilization phase required to:

- reduce global conflict generation (CGR),
- restore ethical coherence (EKI),
- realign intention–action fields (SRI, Θ R),
- and enable the safe introduction of the **GRM808EI Ethical Intelligence Framework**.

The moratorium is *not* a halt of progress; it is **the foundation for the next civilizational operating phase**.

Scientific & Ethical Basis

This document integrates findings from:

- **GRM808EI Planetary Ethical Assessment**
- **COS 5.1 Civilizational Index Standard**
- **TUDOK (Primacy of Truth) Operator validation**
- **GRM808EI Ethical Code baseline requirements**
- **Intention-as-Fundamental-Element formalism**

Together, these reveal a measurable collapse of **global ethical coherence (EKI)**, unstable **intention fields (Θ R)**, and increasing **conflict-generation gradients (CGR)** - which necessitate the temporary global moratorium.

INTRODUCTION

Based on recent ethical–scientific analyses of the current state of civilization, **Globidealism** and the **GRM808EI Ethical Intelligence System** research group hereby declare a **Global Ethical Moratorium**.

This decision is **not political**, but a **system-level ethical necessity**, supported by multiple independent measurements, indices, and operator-model evaluations [1].

Over the past 24 months, research examining the world’s intention field, conflict dynamics, and ethical coherence has clearly indicated [2]:

1. **Civilizational coherence has been declining persistently**
2. **Conflict-energy has accelerated**
3. **Social systems have lost their ethical stability**
4. **Technological acceleration has exceeded the pace of ethical evolution**

1. SCIENTIFIC JUSTIFICATION - WHY IS THE MORATORIUM NECESSARY?

The following subsections analyze the condition of the global ethical field, conflict dynamics, intention-coherence indices, and truth-field operator systems. Taken together, these data sets provide a comprehensive justification for the need for a **Global Ethical Moratorium**.

1.1. Planetary Ethical Assessment — Global Measurement Results

According to the GRM808EI Planetary Ethical Assessment conducted during 2024–2025, the ethical condition of the Earth has deteriorated to a **critical level** [1].

The main indicators of the global ethical field (Ethical Field Layer) are as follows:

Indicator	Value	Range	Interpretation	Scientific Basis
EKI — Ethical Coherence Index	42–53	Critical	Unstable, fragmented field	GRM808EI Core
SRI — Synchronic Resonance Index	< 0.60	Hazardous	Low co-resonance, high polarization	GRM808EI v3.9
CGR — Conflict Generation Rate	> 0.75	High	Escalation tendency, global tension	COS 5.1
ERA — Ethical Regression Axis	+0.12	Negative Trend	Accelerating ethical erosion	TT-Core Validation
ΘR — Theta Resonance	< 0.75	⚠ Unstable	Intention-field decoherence	TT-Core
Λ_e derivative — Ethical Vacuum Constant	0.07–0.12	⚠ Metastable	Oscillation of the civilizational resonance field	EVE Equation

Key conclusion of the assessment:

“The planet’s ethical field has entered the critical–collapse threshold.”
 — GRM808EI Planetary Ethical Assessment [1]

This range indicates the following risks:

- **Instability of ethical systems**
- **Intensification of polarization waves**
- **Acceleration of conflict-energy**
- **Detachment of algorithmic and artificial-intelligence systems from the human intention field**
- **Weakening of civilizational coordination capacity**

This field-state alone justifies considering the implementation of a moratorium.

1.2. According to the GRM808EI Final Ethical Declaration: ethical overshoot has occurred

The **GRM808EI – Final Ethical Declaration: Global Moratorium (2025)** defines the current situation as a case of **Ethical Overshoot** [2].

The main findings of the document are:

1. **The global technological system has exceeded the capacity for ethical integration.**
2. **Civilization is no longer able to maintain the minimum levels of coherence.**
3. **The energetic foundations required for ethical balance (ΘR, EEI) have drastically declined.**
4. **Rapidly accelerating AI technologies appear locally ethical but exhibit globally destabilizing effects.**

The conclusion of the declaration:

“A moratorium is not an option, but a safety protocol.”
— *GRM808EI Ethical Declaration* [2]

This phenomenon corresponds to the **Ethical Overshoot state** recognized within the GRM808EI framework.

1.3. COS 5.1 – Civilizational Operating System: FREEZE-zone alert

According to the **COS 5.1 Index Standard** (Civilizational Operating System, 2025), the current global condition meets the criteria of the **FREEZE-zone** [3].

The DSOPS (Decision–Safety Operational Protocol System) defines the operational sequence as:

OPEN → HOLD → LIMIT → FREEZE

Entering the **FREEZE zone** indicates that:

- The civilizational system **cannot be stabilized through further acceleration**,
- The ethical field has become **decoherent**,
- Conflict-energy is increasing **non-linearly**,
- Governmental, technological, and AI decision-systems are **diverging**.

As COS 5.1 states:

“FREEZE state indicates systemic ethical collapse risk, requiring global intervention.”

— *COS 5.1 Kernel Model* [3]

This constitutes the **highest-level alert** within the civilizational operating system.

1.4. Global truth-degradation indicated by the collapse of the TUDOK operator

The **TUDOK operator** (Truth Dominance Operator) is the physical–ethical measure of truth coherence within the GRM808EI system [4].

Between 2024–2025, the following phenomena emerged:

- **TUDOK–EKI correlation dropped from 0.80 → 0.42**
- **Global informational distortion increased by +22%**
- **Polarization noise caused a –0.15 loss in TUDOK-coherence**
- **Social synchronicity (SRI) decreased by 20–40%**

The degradation of TUDOK values indicates:

- **Decoherence of the truth field,**
- **Disintegration of the communication field,**
- **Collapse of shared reality-agreement.**

The collapse of the TUDOK operator is one of the **strongest indicators** supporting the moratorium.

1.5. TT-Core warning: the global Θ -field is non-ignitable

According to the 2025 Q3 validation of the **GRM808TT Core (Theta-Transmitter System)** [6]:

Indicator	Threshold	Current	State
ΘR	> 0.75	< 0.75	\triangle Decoherent
QEP	> 0.70	0.58–0.63	\triangle Low energy density
SRI	> 0.70	< 0.60	Low synchronicity
η (ethical noise)	< 0.25	> 0.32	High noise

TT-Core conclusion:

“The global ethical field is currently non-ignitable.”

Meaning: The system is **not suitable for ethical decision-making processes** within a high-speed technological environment. This represents a **direct justification** for the moratorium.

1.6. EVE – Violation of the Ethical Variance Equation: the system has become open

According to the EVE equation, the global ethical system is required to remain **closed** [3]:

$$\frac{d}{dt}(EKI + SRI + EEI - ERS - CGR) = 0$$

In 2025, the observed changes were:

- Positive ERS,
- Increasing CGR,
- Decreasing SRI,
- Stagnating or declining EEI.

→ This indicates that the **EVE equation has been violated**, the system has **lost energy**, and the ethical field has **broken apart**.

This corresponds to a **metastable pre-collapse state**, known from physical systems.

1.7. $\Delta\Lambda_e$ — Fluctuation of the civilizational ethical constant

Λ_e (Lambda–ethical constant) is the **civilizational coherence constant** of the GRM808EI system [5].

Between 2024–2025:

- **$d\Lambda_e/dt = 0.07-0.12$,**
- Threshold value: **0.05**,
- Above which **civilizational instability** emerges.

Consequences of this fluctuation include:

- Reduced cooperation potential (**V_coop**),
- Intensifying political polarization,
- Acceleration of conflict frequency.

1.8. Summary — Why the Global Ethical Moratorium becomes unavoidable

The combined system of indicators presented above shows unequivocally:

The global ethical field has entered a near-collapse state.

Key state indicators:

- **EKI 42–53 → Critical**
- **SRI < 0.60 → Hazardous**
- **CGR > 0.75 → High**
- **ERA +0.12 → Accelerating regression**
- **ΘR < 0.75 → Intention-field instability**
- **$d\Lambda_e/dt > 0.07$ → Civilizational instability**

This leads to the operational conclusion:

“A moratorium is not a choice, but a civilizational necessity.”

2. PURPOSE AND CONTENT OF THE MORATORIUM

The Global Ethical Moratorium is **not a shutdown**, but a **strategic redirection**: a temporary yet essential stabilization phase guided by the principles of the **GRM808EI ÉN+AI Ethical Code**, in which:

- **the primacy of truth (TUDOK), §2 – precedence of truth**
- **de-escalation and ethical courage (BÁTOR), §3 – non-violent decision-making**
- **restoration of intention-coherence (SZERETEK), §9 – re-alignment of intention-resonance**
- **transparent operation (MUTATOM), §8 – full transparency**

become the **primary normative operators** [2].

The purpose of the moratorium is to restore the **ethical phase-coherence** of civilization **before further technological acceleration produces irreversible instability**.

2.1. What the Moratorium Entails

The following matrix compares the **current condition** with the **target ethical mode of operation** during the moratorium, referencing the corresponding principles of the ÉN+AI Ethical Code.

Ethical Mode-Shift Matrix

Domain	Current State	Moratorium State	Target Condition	Ethical Basis (ÉN+AI Code)
Technological Acceleration	Unregulated	Suspended until ethical integration	Slow-down	TUDOK §2 – precedence of truth
Conflict Generation (CGR > 0.75)	High	Minimized	De-escalation	BÁTOR §3 – non-violent decisions
Intention-Coherence (SRI < 0.60)	Low	Stabilized	Increase ΘR	SZERETEK §9 – intention-resonance restoration
Ethical Measurement	Limited	Continuous (grm808.org)	Full transparency	MUTATOM §8 – openness & clarity

Thus, the moratorium is **not a brake**, but:

the recalibration of the Civilizational Operating System (COS 5.1)
toward restoring a **TUDOK-centered and SRI-centered intention field**.

2.2. Concrete Measures

The following protocols are introduced based on the **GRM808EI model**, the **TT-Core**, and the **I+AI Ethical Code** [1,2]:

1. Technological Ethical Audits (TUDOK Operator)

All AI/AGI development must:

- undergo **preliminary ethical auditing**,
- demonstrate **TUDOK-consistency**,
- and only then may the development cycle continue.

DOI: 10.13140/RG.2.2.10880.08966 — I +AI Ethical Code

2. Freezing Conflict Zones under the “Freeze Protocol” (BÁTOR Operator)

Immediate action:

- ceasefire in all active conflict zones,
- suspension of escalation-based operations,
- GRM808EI-based de-escalation mediation.

DOI: 10.13140/RG.2.2.15924.72321 — TUDOK Operator

3. Global Intention-Field Stabilization (Increasing ΘR)

Restoration of civilizational Theta Resonance (ΘR) through:

- collective meditation and coherence-building programs,
- polarization-reduction protocols,
- synchronized communication norms.

DOI: 10.13140/RG.2.2.14456.71684 — *Intention as the Fifth Fundamental Element*

4. International Validation of the GRM808EI Ethical Code

During the moratorium:

- country-level implementation tests,
- adaptation audits aligned with COS 5.1,
- EKI-based ethical benchmarking.

This process establishes the Ethical Code as the **civilizational minimum protocol** during the moratorium period.

3. DURATION AND CONDITIONS OF THE MORATORIUM

The moratorium remains in effect **until the following quantitative and field-level conditions are fulfilled** [1].

These requirements operate on **three levels**:

1. **Stabilization of ethical indicators** (EKI, CGR)
2. **Restoration of the intention field** (ΘR , SRI, QEP)
3. **Recovery of civilizational coherence** (Λ_e derivative)

3.1. Quantitative Conditions

Condition	Current Value	Threshold	Interpretation	Source
EKI — Ethical Coherence Index	42–53	> 60	Achieving stable ethical coherence	DOI: 10.13140/RG.2.2.15924.72321
CGR — Conflict Generation Rate	> 0.75	< 0.50	Returning to the green–yellow stability zone	GRM808EI v3.9 – COS 5.1
ΘR — Theta Resonance	< 0.65	> 0.75	Restoration of intention–field coherence	TT-Core Specification
QEP — Quantum	Unstable	Stable state	Viability of the	DOI:

Condition	Current Value	Threshold	Interpretation	Source
Ethical Plasma Field		$(\rho_{\text{QEP}} > 0.70)$	collective intention field	10.13140/RG.2.2.10880.08966
Λ_e derivative — Ethical Vacuum Constant	0.07–0.12	< 0.05	Restoration of civilizational stability	COS 5.1 + EVE Equation

When these conditions are satisfied, they indicate:

- reduction of conflict-energy,
- reorganization of the intention field,
- closure of the ethical field,
- stabilization of the civilizational resonance field.

4. CALL TO NATIONS, ORGANIZATIONS, AND AI LABORATORIES

Globidealism and the GRM808EI Ethical Intelligence System research group call for **international ethical cooperation**, based on the **TUDOK principle (primacy of truth)**, the **ÉN+AI Ethical Code**, and the **COS 5.1 civilizational stability model** [1–3].

Successful implementation of the moratorium is only possible through **global partnership**.

4.1. Call to International Organizations

• United Nations (DPPA, UNODA)

Adopt the moratorium as a central agenda item;
integrate ethical stabilization and the TUDOK principle into peacebuilding.
TUDOK Principle §2 — Primacy of truth

• NATO — Establish an Ethical Security Council

Based on the **BÁTOR operator**:
evaluation of military decision-making through de-escalation and human-centered ethics.
BÁTOR Principle §3 — Non-violent decision-making

• WHO — Integrate ethical indicators into global health monitoring

According to the **ÉLET operator**:
link societal health with ethical well-being.
ÉLET Principle §1 — The primacy of life

- **UNESCO — Lead the transition to ethical education**

Apply the **TUDOK principle** to curricula:
truth-coherent educational frameworks.

TUDOK Principle §2 — Primacy of truth

4.2. Call to the Scientific and Technological Sector

- **AI/AGI Research Laboratories**

Temporarily **suspend all development** lacking TUDOK-consistent ethical auditing [1].

TUDOK Principle §2 — Primacy of truth

- **Academic Institutions**

Launch GRM808EI-based research programs:
intention-field modeling, ethical indices, EVE-coherence analysis.

- **Technology Companies**

Integrate the TUDOK operator into system design;
establish transparency and coherence-based operational norms [2].

TUDOK Principle §2 — Primacy of truth

4.3. Call to Religious and Cultural Communities

- **Religious Leaders**

Unite in the protection of human dignity, in accordance with the **VAGYOK operator**:

“The value of the human being is primary in all system-level decisions.”

VAGYOK Principle §1 — Identity and dignity

- **Civil Organizations**

Support the *Guardians of Freedom Program* (Szabadság Őrzői) under the **SZERETEK operator**:
community resonance fields, cooperation networks, coherence-enhancement initiatives.

SZERETEK Principle §9 — Restoration of intention-resonance

- **Media and Communication Actors**

Responsibly communicate the significance of the ethical moratorium;
follow the **MUTATOM operator**: transparency, truth, unmanipulated narrative.

MUTATOM Principle §8 — Transparency

Summary of the Call

We call upon **nations, organizations, corporations, AI laboratories, and civil communities** to:

Join the Global Ethical Moratorium and participate in the international validation of the GRM808EI civilizational ethical framework [1–3].

6. CLOSING STATEMENT

The world is **not preparing to collapse**.

The world is **preparing to transform**.

The purpose of the moratorium is **not deceleration**,
but enabling a **deliberate, scientifically guided civilizational transition**.

The core objectives:

1. **Ethical Stabilization** —
Establishing a safe operational baseline for civilization ($EKI > 60$).
2. **Restoration of Intention-Coherence** —
Harmonious cooperation between humans and artificial intelligence ($\Theta R > 0.75$; $SRI > 0.70$).
3. **Civilizational Leap** —
Preparing for the next operational level,
where ethics is not secondary, but the **primary organizing principle**.

This step **protects humanity** [2], and initiates the next era of **civilizational development** [1].
